COGNITIVE RADIO COMPANY EARNS INTERNATIONAL AWARD FOR BEST WIRELESS EQUIPMENT

ORLANDO, Fla. (May 29, 2008) – Melbourne, Florida-based Adapt4, the world's leader in commercial cognitive radio technology, has earned the Best Wireless Equipment award for 2008 from the Utilities Telecom Council (UTC) for its white space radio technology.

The award was presented at the UTC Expo, May 6, 2008 in Orlando, for Adapt4's XG2^{Plus} IP radio, which utilizes revolutionary cognitive technology to provide a solution for radio frequency users frustrated by a lack of radio spectrum.

The technology works by successfully tapping into unused radio spectrum to provide communication channels for a variety of uses. The XG2^{Plus} continuously scans the radio frequency spectrum for licensed idle space. Once an unused frequency is found, it begins transmitting on that frequency until it is once again occupied by its licensed owner. The XG2^{Plus} then seamlessly switches transmission to another open frequency without disruption or interference.

"The proliferation of wireless devices continues to create a crowded radio spectrum with very little room for new uses," says Bob Lawless, president and chief operating officer for Adapt4. "Adapt4's cognitive and white space radios provide customers the opportunity to implement new networks, or to expand existing networks that are currently restricted by the scarcity of licensable FCC frequencies, without resorting to unreliable or unlicensed alternatives."

The XG2^{Plus} is already in use throughout the country in several field trials. Since the XG2^{Plus} provides a seamless way to transition from legacy to IP networking, the technology is a viable solution for utility companies undergoing a fundamental change to more intelligently manage distribution services. Efforts to implement technology to facilitate that transition will result in investments of \$70 billion to \$130 billion by 2030.

###

Adapt4's XG2^{PLUS} provides Interference-Free, Non-Line of Sight, Fixed and / or Mobile, High Speed SCADA operations on "Always Available" VHF / UHF Licensed Frequencies. For more information on Adapt4's complete line of White Space and Cognitive Radio Products, contact Paul Greenis, VP Marketing and Sales @ paul@adapt4.com.
